IMMEDIATE RELEASE

MEDIA ADVISORY

WORLD IBD DAY 2021 – EXHIBITION AT PARLIAMENT

Exhibiting their artistic talents, politicians and leaders across New Zealand have put up their hands to raise awareness of people living with chronic illnesses. On the 24th of May, an artistic installation called “Unmasking IBD” will be unveiled at the Grand Hall of Parliament, representing the masks that people with chronic diseases like Crohn’s disease and ulcerative colitis wear to hide their illnesses in everyday life. The installation will travel throughout the country during 2021-2022.

Prominent New Zealanders are creating doodles and drawings, empathising with those behind the masks. These doodles will be exhibited as a key part of an installation created by noted Wairarapa artist Katie Gracie who was diagnosed with ulcerative colitis nine years ago.

Gracie notes that “While the project is in commemoration of World IBD Day, I hope this installation will raise awareness of everyone who is living and dealing with a chronic illness.”

The installation features life-size figures of people dealing with chronic diseases, hiding behind “masks of wellness”. Dr. Richard Stein, gastroenterologist and Chairman of the Crohn’s and Colitis NZ Charitable Trust, says, “The artist has brilliantly captured the message we want to convey, that many diseases are “hidden”. There are people all around us, in the workplace, studying in our schools and universities, raising families who are dealing with challenges most of us cannot even imagine. This purpose of this installation is to raise awareness and to honour their strength.”

The event is being hosted by Health Select Committee member, Chris Bishop in conjunction with Crohn’s and Colitis New Zealand Charitable Trust, commemorating World IBD Day, which is celebrated in over fifty countries. One of the speakers will be CCNZ youth ambassador, 16-year-old Nicole Thornton, whose initiatives to promote toilet access in New Zealand, have been widely publicized.

Doodles have already been submitted from notables like Hon. Marama Davidson, Hon. Peter Dunne and Dr. Ashley Bloomfield.

ENDS

Attached are pictures of some of the artwork to be displayed.

About Crohn's disease and ulcerative colitis¹:

- Crohn's and ulcerative colitis are chronic, incurable, inflammatory diseases collectively known as Inflammatory Bowel Disease (IBD).
- Over 20,000 New Zealanders have IBD.
- New Zealand has the third highest IBD rate in the world.
- Most people are diagnosed in childhood, their teens or early adulthood, and suffer with these illnesses their entire lives. Children in particular are impacted in their most formative years.
- Symptoms are severe, urgent, bloody diarrhoea, bowel blockages, abdominal pain, perforated intestines, and abscesses and inflammation in the anal area.
- 'Flares' of the disease are common and frequently involve emergency hospitalisation, and repeated irreversible surgeries to remove sections of the bowel.
- Many patients are forced to live with a permanent ostomy (bag).
- IBD has an array of other symptoms including arthritis, diseases of the spine, the liver, diseases of the eyes, skin lesions, and an increased risk of bowel cancer.
- NZ has one of the highest per capita rates of IBD in the world, and it is growing at over 5% per year.
- IBD has profound physical, social and psychological impacts on those living with it, affecting their education, social relationships, work lives, and their ability to have a family.
- IBD costs NZ an estimated \$245 million in healthcare costs and lost productivity.
- There are two effective, but currently unfunded treatments for people with severe Crohn's and Colitis who have failed to respond to medications currently available in NZ :
 - o ustekinumab, which was approved by Medsafe in early 2018, has been given high priority by Pharmac's gastroenterology sub committee, but has not been funded by Pharmac; and
 - o vedolizumab, which is currently awaiting Medsafe registration.
